Date of Hair Sampling _____

Colour of Hair _____

What are the primary and current health concerns? _____

Past health conditions:

What kind of diet or feed program is your horse on?

Which supplements or medications is your horse taking?

Signature

Date

How To Prepare the Hair Sample

- Cut a hair sample that weighs approximately 125 mg (about ½ Tablespoon) as close to the skin as possible from the base of the mane. Wash the testing area with rubbing alcohol and let dry completely before cutting the sample.
- The hair sample should be no longer than 1 - ½ inches
- Cut the extra length off and keep the 1 - ½ inch section that was closest to the skin.

Mailing the Hair Sample

Place the hair sample in a paper envelope. Do not use plastic or zip-lock baggies and do not tape the sample to a piece of paper or put it in aluminum foil. Plastic, glue and aluminum will contaminate the hair sample.

Return the envelope with hair sample and a completed intake form. The Intake Form can be filled out online and uploaded or printed off and filled out manually and mailed with the hair sample. Also email two photographs.

Photographs

Take one complete body picture (no blanket) and one portrait picture showing your horse's face. The best pictures are taken outside in good light. Ensure that the pictures are in focus.
